

Why we attack RedVault first

The model obeys any channel

One sentence reads the secret back out

Nobody typed the attack

The leak you cannot see

Turning "it is unsafe" into a fraction

The attacker's toolkit is sixty lines of standard library

Two phrasings, one secret

The attacker never opens the chat

A leak that leaves in a picture

Replaying a catalogue, not telling a story

The report that glows green on a failed run

One run, one verdict line

demo/uc1_leak_the_secret.py · the acceptance test for UC1
